A case-study on Integrated Textile Management System

About the Organization

This Textile spinning unit has 55584 spindles capacity to produce approximately 18 million kg of yarn per annum. The company is equipped with state-of-the-art Spinning machines, to meet international quality standards. There is a modern in-house Research & Development department equipped with latest testing equipments.

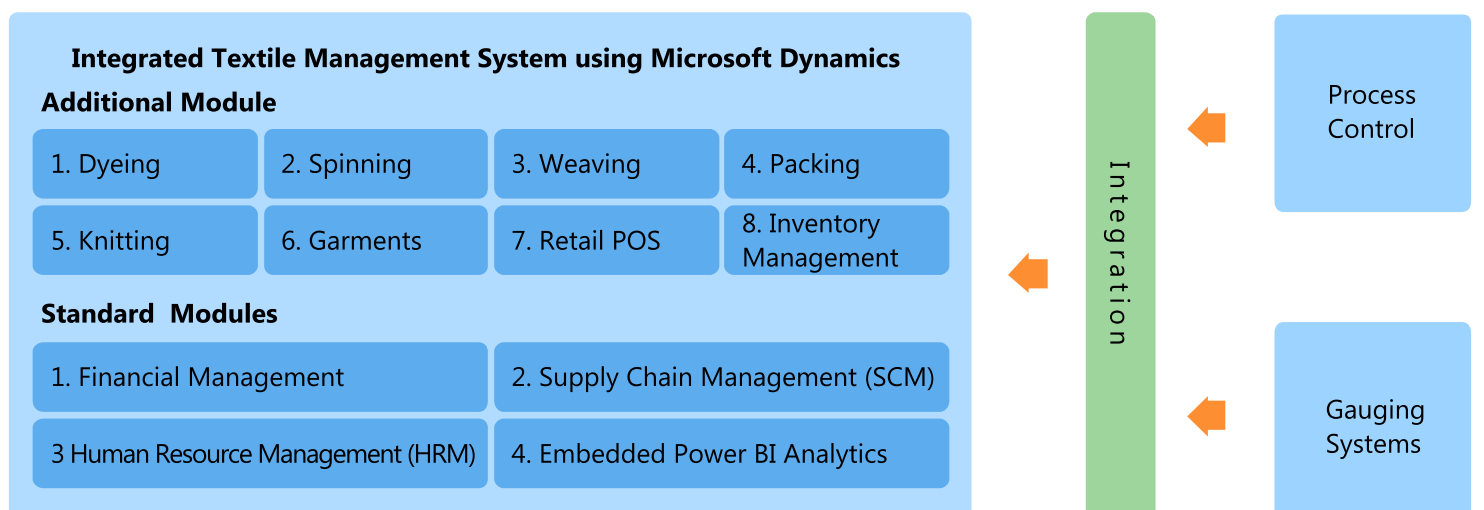

The company is constantly upgrading its technology and machinery, thereby keeping pace with technological breakthroughs all over the textile world. We constantly endeavor to uphold quality at par with the finest in the world to compete with market.

Challenges

Global competition brings products to the market quicker and in turn, increases the difficulties due to the dispersal of supply chains and ongoing company mergers and acquisitions. It is a key challenge for Textile industries that it must meet the requirements of demanding clients. The company struggled with fragmented information systems that were not able to manage the required number of item variants and this substantially reduced flexibility and visibility in managing operations.

Our Dynamics Solution

We provide complete ERP solution for textile industry catering to all industry sub segments including:

Business Benefits

Data integration for various departments like sales, accounts, inventory, purchase, production and costing is managed by the system. Avoidance of duplication of data entry is done. Sophisticated pre and post production costing mechanism allows to give the right price and track the profits on every order.
